

Oussama Hmidene

• Tunisia, Sousse • oussama.hmidene1@gmail.com • +216 51684918 • [LinkedIn](#)

Data Engineer / Analytics Engineer with experience building data pipelines, cloud-based ingestion, web scraping, and deploying data solutions. Skilled in transforming raw data into reliable datasets that power analytics and dashboarding for business use.

Skills

Data Engineering & Big Data: Apache Spark, Databricks, Delta Lake, Dagster, ETL/ELT, Data Lakes, Data Warehousing

Programming & Databases: Python, SQL, Java, PostgreSQL, Snowflake

Cloud, DevOps & Environment: AWS, Docker, Git, Linux, Anaconda

APIs, Automation & Data Extraction: FastAPI, REST APIs, Web Scraping, Selenium, BeautifulSoup, Camelot, Dropbox

Analytics, ML & Visualization: Pandas, NumPy, Statistics, Scikit-learn, Machine Learning, Power BI, Excel, DAX

Professional Experience

DATA ANALYTICS ENGINEER

DNEXT INTELLIGENCE SA – SOUSSE, TUNISIA

Mars 2024–Present

- Built and maintained **automated data pipelines** to ingest livestock, trade, and invoice data from **40+ international sources** using **Python, Selenium, and BeautifulSoup**.
- Designed and orchestrated **ETL workflows with Dagster**, integrating **Snowflake and PostgreSQL** to deliver **clean, reliable, and analytics-ready datasets**.
- Implemented **data quality pipelines** (freshness, completeness, gap detection, anomaly detection) to ensure dataset accuracy and consistency.
- Containerized extraction and processing services using **Docker**, enabling scalable and reproducible deployments.
- Modeled and prepared **analytics-ready tables** consumed by **dynamic Power BI dashboards**, enabling insights on production, slaughter statistics, and trade flows across countries.
- Supported downstream **BI and reporting use cases** by optimizing data models, refresh performance, and data availability.

Tech Stack: Python, Dagster, Snowflake, PostgreSQL, Docker, Selenium, BeautifulSoup, Pandas, Power BI, FastAPI

DATA SCIENTIST INTERN

BRAINSTACK – SOUSSE, TUNISIA

February 2023–September 2023

- Built **automated web data extraction pipelines** using **Python and Selenium** to support AI-driven web agents.
- Designed **data preprocessing and feature engineering workflows** using **Pandas and NLP techniques**, preparing structured datasets from raw web content. ([Demo](#))
- Developed and evaluated **machine learning models** to improve web element detection and automation reliability.
- Containerized automation and ML workflows using **Docker** and **Bash** to ensure reproducible execution.

Tech Stack: Python, Selenium, Pandas, Scikit-learn, Keras, Docker, Bash

DATA SCIENTIST INTERN

Nachd-IT – SOUSSE, TUNISIA

June 2022–August 2022

- Built **automated data extraction and pipelines** from the **Jira API**, enabling scheduled updates of productivity and performance data.
- Modeled and transformed Jira data using **Power Query** and **DAX** to compute KPIs, performance evolution, and employee rankings.
- Developed **dynamic Power BI dashboards** to provide stakeholders with clear, interactive insights into team productivity and trends.

Tech Stack: Power BI, Jira API, Power Query, DAX, SQL

EDUCATION AND TRAINING

Engineering Degree in Computer Science —Higher Institute of Applied Science and Technology of Souss (Aug 2021 – Sep 2023)

Integrated Preparatory Cycle — Higher Institute of Applied Science and Technology of Sousse, Tunisia (Aug 2018 – May 2020)
